

PHILIP MWANGI

Nairobi, Kenya • +254719529390 • iamphilipmwangi@gmail.com

Career Objective

Motivated cybersecurity student seeking a hands-on internship opportunity to gain real-world industry experience, strengthen technical and analytical skills, and contribute to practical security projects within a dynamic corporate environment.

Professional Summary

Recent graduate in Cybersecurity and Ethical Hacking with hands-on experience in intrusion detection systems, penetration testing, web application security based on the OWASP Top 10, and phishing simulations. Highly eager to learn, adaptable, and passionate about applying technical knowledge to real-world security challenges while contributing effectively within a collaborative team environment.

Education

- Diploma in Cybersecurity and Ethical Hacking - Institute of Software Technologies
January 2025 – February 2026
- Certificate in Cybersecurity and Ethical Hacking -Institute of Software Technologies
May 2024 – September 2025
- High School Certificate -UpperHill School
January 2020 – November 2023

Technical Skills

Cybersecurity

- Intrusion Detection Systems (IDS)
- Network traffic analysis
- Web application penetration testing
- OWASP Top 10 vulnerability testing
- Phishing simulations and credential harvesting
- Offensive and defensive security fundamentals
- Network security fundamentals

Web Development

- Frontend development using HTML, CSS, JavaScript
- Responsive web design and mobile-friendly interfaces
- Basic backend development concepts
- Website deployment and hosting fundamentals
- Version control using Git and GitHub
- Web application security best practices
- Basic database integration and management

Web Development Projects

Portfolio Website Development

Designed and developed responsive personal or portfolio websites using HTML, CSS, and JavaScript.

Implemented user-friendly interfaces, responsive layouts, and modern design principles to enhance user experience across desktop and mobile devices.

Cybersecurity Projects

Intrusion Detection Systems (IDS) Implementation

- Designed, configured, and deployed Snort IDS to monitor and analyze network traffic in real time.
- Created custom detection rules to identify and respond to malicious activities such as ICMP floods, SSH brute-force attempts, and other network-based attacks.
- Performed basic network forensics using Wireshark and Snort logs to analyze attack patterns, detect anomalies, and document findings.

OWASP Top 10 Web Vulnerability Assessment

- Conducted web application security assessments targeting OWASP Top 10 vulnerabilities including SQL injection, cross-site scripting (XSS), insecure authentication, and sensitive data exposure.
- Used automated tools and manual testing techniques to identify, exploit, and document security weaknesses.
- Provided mitigation recommendations to improve overall web application security posture.

Penetration Testing

- Performed ethical hacking exercises simulating real-world cyberattacks on web applications and network environments.
- Applied reconnaissance, scanning, exploitation, and post-exploitation methodologies to identify security gaps.
- Prepared structured reports outlining vulnerabilities, risk impact, and remediation strategies.

Phishing Simulation and Security Awareness

- Implemented phishing simulations using GoPhish to assess end-user susceptibility to social engineering attacks.
- Developed realistic email templates and landing pages to simulate credential-harvesting attacks.
- Analyzed campaign results including click-through rates and credential submissions to evaluate effectiveness.

Mobile and Computer Forensics Project

- Completed a practical digital forensics project focusing on mobile and computer systems.
- Performed forensic analysis on devices to identify, collect, and examine digital artifacts such as files, logs, and user activity.
- Applied forensic methodologies to preserve evidence integrity, analyze findings, and document results in a structured forensic report, demonstrating foundational skills in endpoint investigation and digital evidence handling.

Languages

English: Full Professional Proficiency

Swahili: Full Professional Proficiency

Professional Attributes and Soft Skills

- Strong analytical and problem-solving skills
- Detail-oriented and methodical approach to investigations
- Effective communication and teamwork skills
- High adaptability and eagerness to learn
- Curiosity and passion for cybersecurity
- Ability to work well in fast-paced and structured environments
